Transcript of video Renaming Tens with Addition

Vince: Solve 57 plus 28 any way you like?

Anne: Fifty and twenty is seventy, seven and seven is fourteen, and one more is fifteen. So seventy and fifteen is eighty-five.

(Collects five bundles of tens and two bundles of tens, then adds the single sticks)

Vince: Okay. Can you show me that fifteen?

(Making a bundle of ten icy pole sticks and leaving five loose ones)

Anne: It's ten and five.

Vince: Okay. Now show me why the answer is eighty-five?

Anne: Because there're seven tens here, that's seventy and here is another ten, that's eighty, and five more, five ones.

(Explaining the calculation behind the solution to the problem)
